- Support Mobile, Web and more Platforms
- Logo, Album and Game Scenes
- Three Extra Backgrounds
- Unity UI built-in features
- Persistent data (loading & saving)
- Scrollable lists
- Letters Rating
- Load Scenes A sync
- Debug messages
- Commented source code in C#
- Package Manual

2.0 -Logo Scene

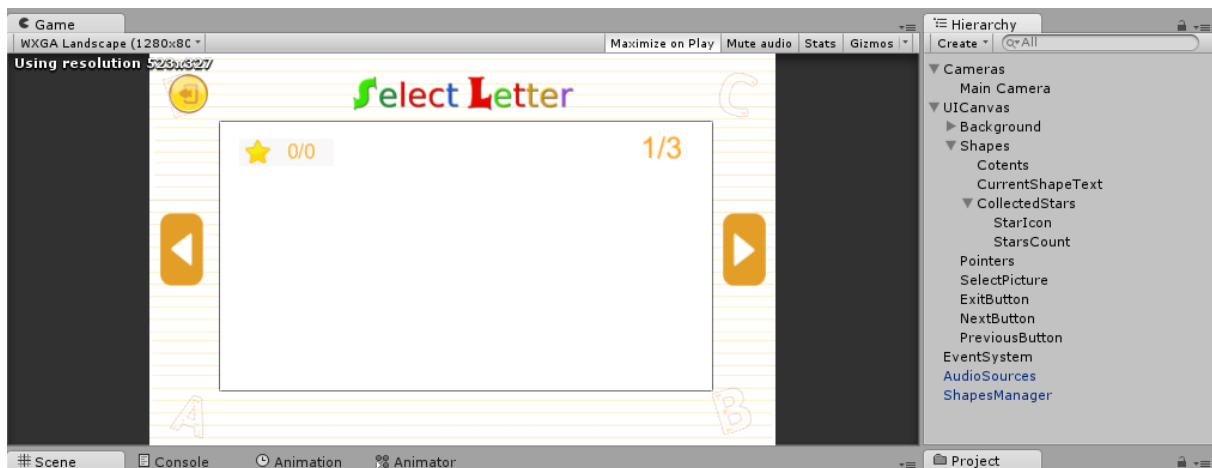

Introduce your game here by adding the `logo`, `title` ... etc.

You can change `sleep time` and `Next Scene` from `Logo` component in `Logo GameObject` as following

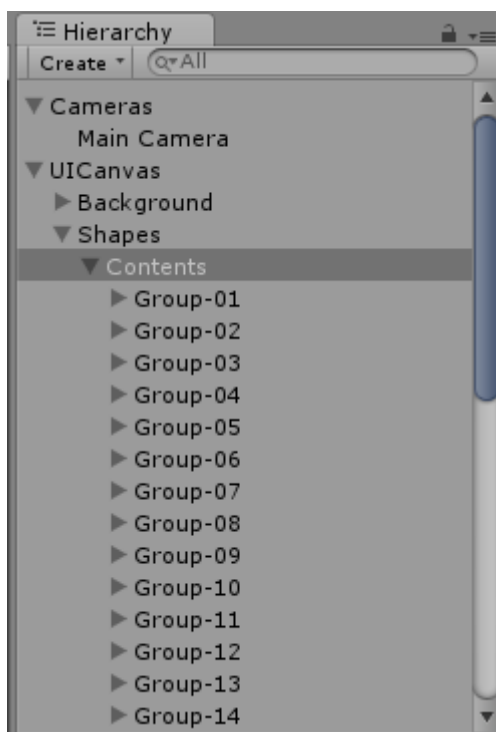

3.0 -Album Scene

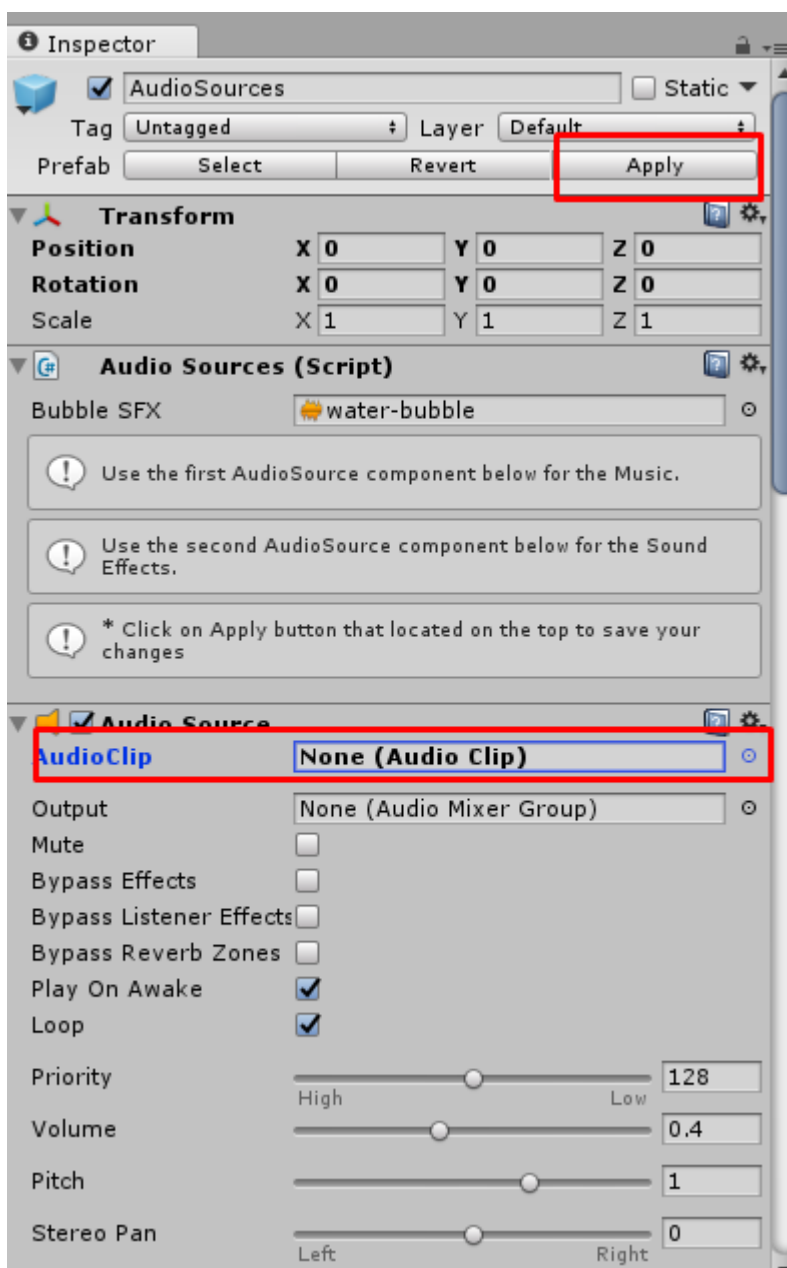

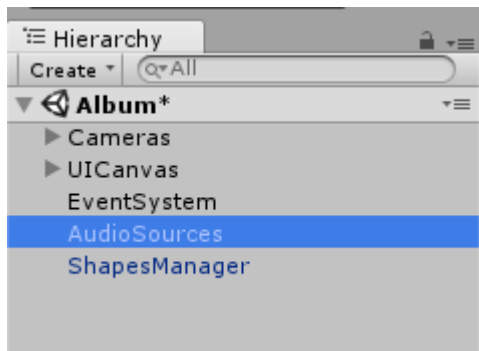

The Album scene contains the sliding letters to give the user the ability to select any letter that he/she wants for Tracing.

You will find the letters automatically generated under **Shapes** GameObject using **ShapesTable** component

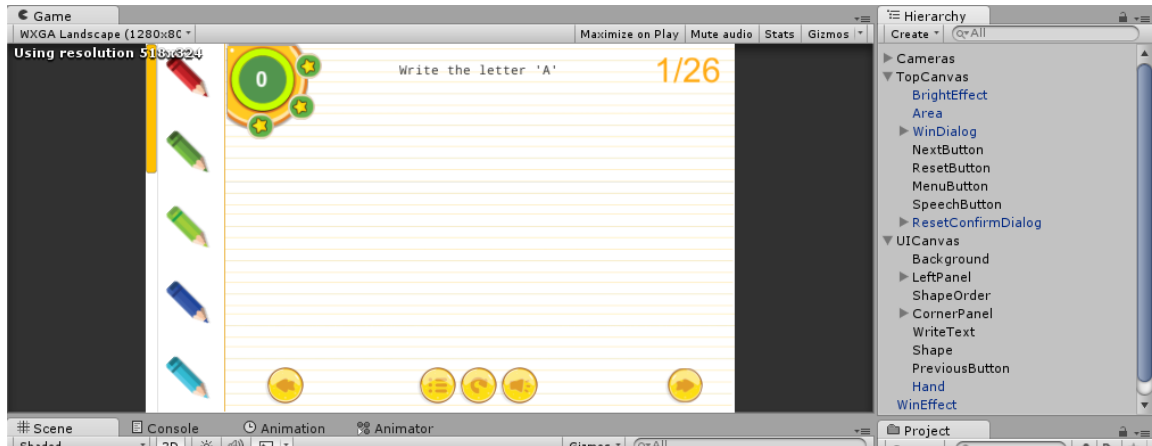

Check the following figure:

To setup your music, Select **AudioSources** gameobject in the Album scene and then set your audio clip in the first AudioSource component, and finally Click on **Apply** button to save your changes.

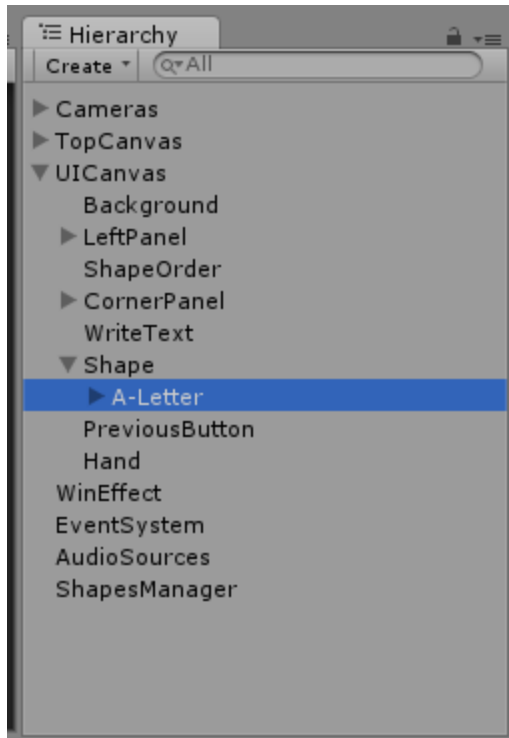

4.0 - Game Scene

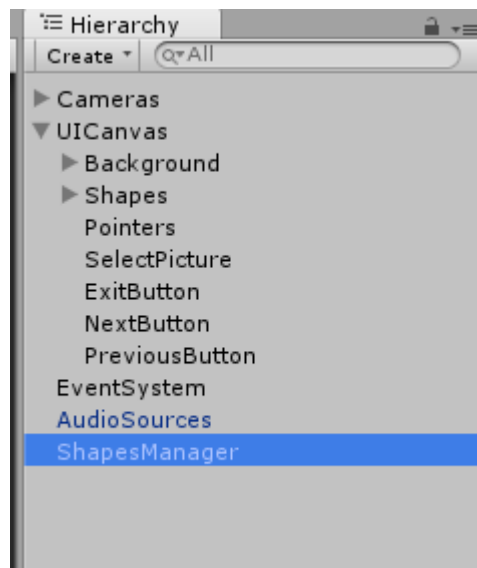

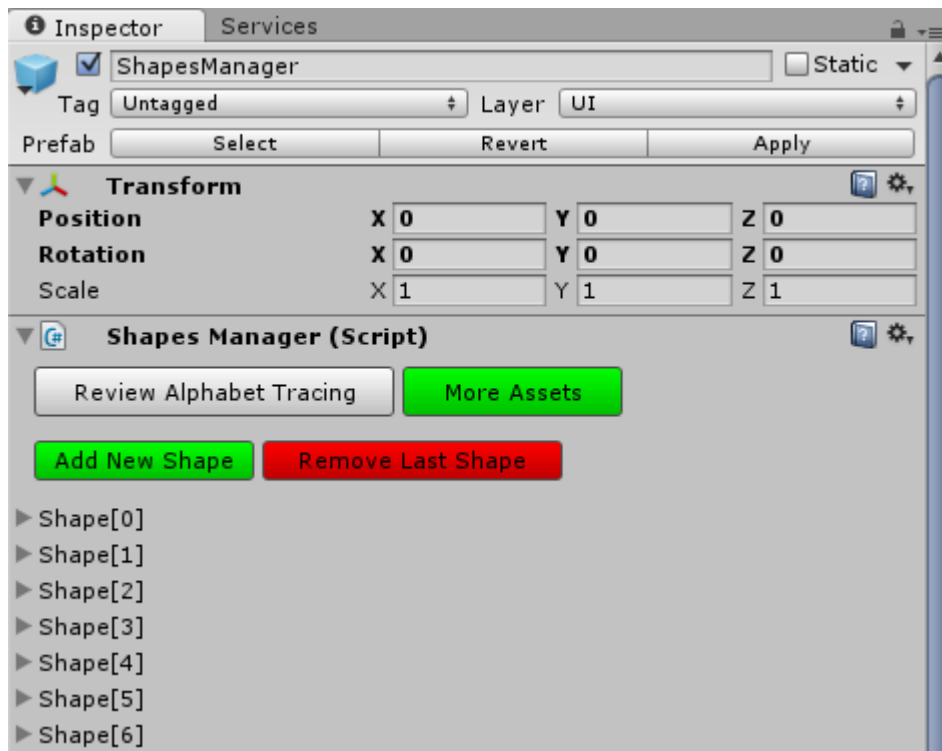

The game scene contains the main components of the game (Game Logic)

The letter will be automatically generated under **Shape** GameObject in the Hierarchy using **CreateShape** method in **GameManager.cs** script as the following :

5.0 - Shapes Manager

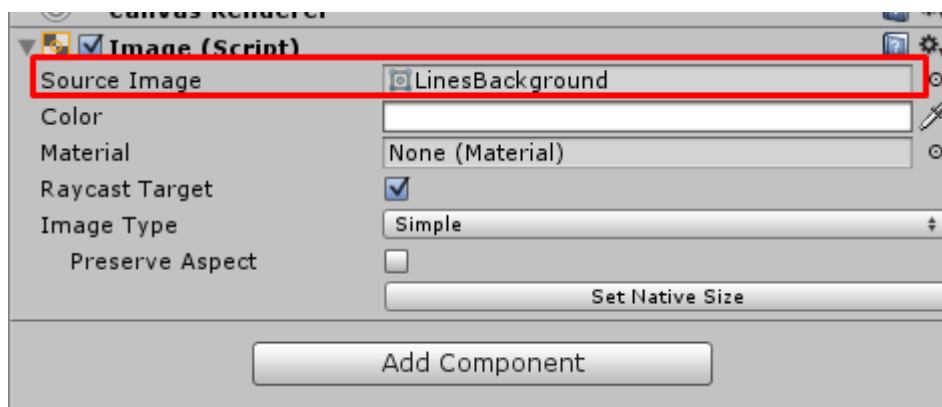

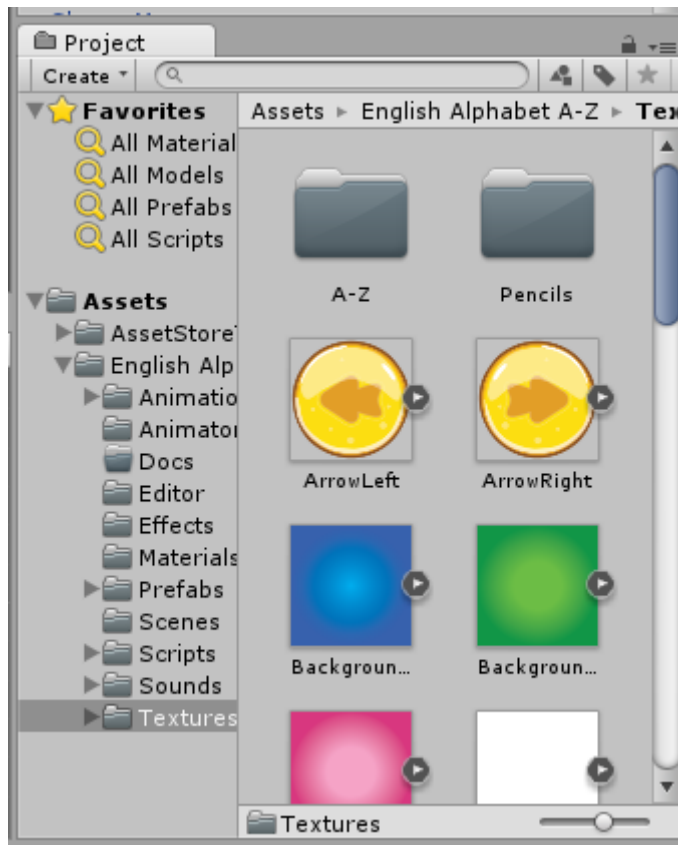

Shapes Manager contains the letters prefabs to create them in Album and Game Scenes.

6.0 - How to Reskin

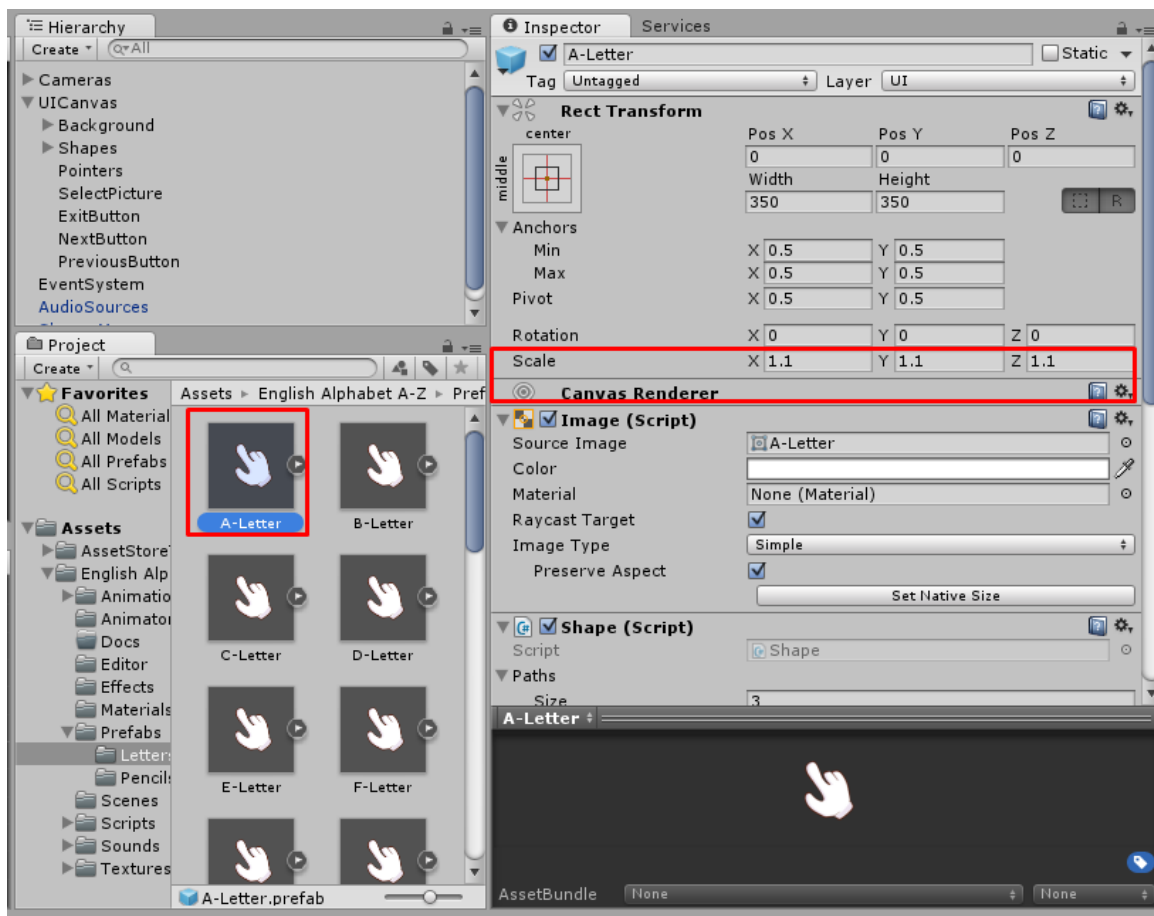

We recommend to reskin your Package to make your app unique in the stores.

After you design new images replace them (the same name) in **Textures** folder to reskin your App. If you have missing references change the sprite or Source Image from SpriteRenderer or Image component in the GameObject.

7.0 - Resize The Letter

To scale the Letter in Game scene, change the scale from its prefab in the **prefabs** folder as following figure below :

8.0 - Win / Rest Shape Dialogs

- Show Dialog

To show the Reset or Win Dialog, you need to call the `Show()` method

Example:

- `GameObject.Find ("ResetConfirmDialog").GetComponent<Dialog> ().Show ();`
- `GameObject.Find ("WinDialog").GetComponent<WinDialog> ().Show ();`

- Hide Dialog

To hide the Reset or Win Dialog, you need to call the `Hide()` method

Example:

- `GameObject.Find ("ResetConfirmDialog").GetComponent<Dialog> ().hide ();`
- `GameObject.Find ("WinDialog").GetComponent<WinDialog> ().hide ();`

9.0 - More Details

If you have more questions, suggestions, comments, feature requests or bug detected, you can contact us and we would be happy to listen from you.
